### How you can build an easy free piston Stirling engine ...

A Stirling engine is a heat engine that operates by cyclic compression and expansion of air or other gas (the working fluid) at different temperatures, such that there is a net conversion of heat energy to mechanical work. More specifically, the Stirling engine is a closed-cycle regenerative heat engine with a permanently gaseous working fluid. Closed-cycle, in this context, means a ...

The Stirling engines being researched here are the acoustic engines and the Alpha-V engine. The acoustic engine was built and the Alpha-V was designed. The idea in the beginning was to improve each engine based around efficiency. Theoretically the different designs could be improved based on different factors.

The Alpha engine is conceptually the simplest Stirling engine configuration, however suffers from the disadvantage that both the hot and cold pistons need to have seals to contain the working gas. There are a number of mechanical mechanisms which enable this type of engine to operate correctly with the correct phasing of the two pistons.

### **Stirling Engine Models - Kits, Ready to Run and DIY**

The Stirling engine (or Stirling's air engine as it was known at the time) was invented and patented in 1816. It followed earlier attempts at making an air engine but was probably the first put to practical use when, in 1818, an engine built by Stirling was employed pumping water in a quarry. The main subject of Stirling's original patent was a heat exchanger, which he called an "economiser ...
