Apache2 Ubuntu Default Page: It works

Apache2 Ubuntu Default Page: It works

In Model 3-2, the long-run (a.k.a. steady-state) expected total time in system of a loan application is 20 hours, which can be derived from queueing theory, namely, exponential queues in series. This means that in a mythical simulation of infinite length (rather than the 160 hours we ran), loan applications would average 20 hours from entry to exit; there's no uncertainty associated with ...
